EDUCATION

University of Toronto	Toronto, ON
Master of Engineering, Materials Science & Engineering (GPA: 3.74/4.0)	2024 – 2025
Taipei Medical University	Taipei, Taiwan
Bachelor of Science, Biomedical Engineering (GPA: 3.91/4.0)	2020 – 2024
• Relevant Courses: Medical Electronics, Medical Device Regulations & Compliance, Medical Imaging Systems, Forensic Engineering	

SKILLS

Diagnostics:	Electrical troubleshooting (multimeter); mechanical inspection; functional testing; system verification
Service:	Preventive maintenance (PM); installation & setup; equipment servicing; calibration & verification, repair support
Medical:	Medical imaging systems; laser systems; clinical device support; healthcare safety protocols
Tools:	Multimeter; patient simulator (Fluke ProSim 8); diagnostic test equipment; functional testing tools
Documentation:	Service reports; maintenance logs; SOP adherence; regulatory compliance; equipment tracking & records

WORK EXPERIENCE

National Cheng Kung University Hospital	Jan 2024 – Feb 2024
Biomedical Engineer Intern	
- Performed functional testing and system verification on 15+ clinical devices using a multifunction patient simulator (ECG, SpO₂, NIBP), ensuring compliance with manufacturer specifications. - Supported troubleshooting and repair activities alongside biomedical engineers, assisting in inspection, issue identification, and preventive maintenance of medical devices to maintain device functionality and reliability. - Contributed to equipment reliability across multiple hospital departments by identifying performance issues and supporting maintenance workflows, helping ensure consistent operation of patient monitoring systems.	
TBMS International Corporation	Jul 2023 – Aug 2023
Biomedical Engineer Intern	
- Conducted functional testing and operational evaluation on 20+ medical laser and imaging systems across 10+ healthcare facilities, identifying performance deviations to support equipment reliability and service readiness. - Assisted with installation and commissioning of dental imaging and laser systems (Carestream CS2200, BIOLASE Waterlase), supporting system setup and verification to ensure proper functionality prior to clinical use. - Participated in equipment inspection, troubleshooting, and repair support activities, working alongside engineers to address device performance issues and minimize equipment downtime. - Maintained detailed service records and equipment tracking logs, supporting traceability and ongoing maintenance activities to ensure accurate documentation and equipment visibility.	

RESEARCH EXPERIENCE

Taipei Medical University (David Lundy's Lab)	Feb 2022 – Jun 2024
Undergraduate Researcher	
- Standardized platelet lysate and extracellular vesicle (EV) preparation procedures into a reproducible protocol, improving consistency and supporting a published methodology in <i>MethodsX</i> (2024). - Conducted biomaterials experiments using BMDM cell assays and RT-qPCR independently, analyzing data in Excel and GraphPad Prism to support process validation and experimental reliability.
